- Oh, good that you're here Pam. You probably remember on which page is "Landing in fog."

Foreword	11
1. Data Mining in General	17
1.1. Why Data Mining?	19
1.2. Technology for Uncovering Hidden Information	20
1.3. Pitfalls and Difficulties	20
1.4. Data Mining and Business	23
1.5. Data Mining and Statistics	27
1.6. Data Mining and Conventional Data Analytics	27
1.7. Data Mining and Manual Analysis	29
1.8. Business Value in an Ocean of Data	30
1.9. The Structure of This Book	30
1.10. The Authors of This Book	32
2. Business Intelligence and Data Warehouses	35
2.1. Business Intelligence (BI)	37
2.2. Data Warehouses. From Source Systems to Data Mining – Data Warehouses and Data Marts	42
2.3. Metadata	50
2.4. Exploitation	54
2.5. OLAP	58
2.6. Other Exploitation Technologies	61
3. Lessons from Data Warehousing Projects	63
3.1. Establishing a Corporate Data Warehouse	65
3.2. The Conditions Necessary for a Successful Implementation	79
4. The Methodology of Data Mining Projects	89
4.1. Data Mining Projects	91
4.2. Business-Oriented View	92
4.3. Methodologies	92
4.4. Success Factors for Data Mining	96
5. A Typical Data Mining Problem: Predictive Modelling	99
5.1. Predicting the Future	101
5.2. The Predictive Modelling Process	103
5.3. The Purpose of Predictive Modelling	104
5.4. Scorecard	104
5.5. Making Predictions Based on the Past	105

5.6. Setting up an Analytical Environment, Collecting Data and Definitions	106
5.7. Examining and Understanding the Data	108
5.8. Data Modification, Preparing Data for Modelling, Modelling	115
5.9. Building and Applying the Model	127
5.10. Applying the Final Model	130
6. Segmentation	131
6.1. The Purpose of Segmentation	133
6.2. Customer Segmentation	133
6.3. Elements of Customer Segmentation	135
6.4. Preparation of Data	138
6.5. Segmentation Base Table	140
6.6. Segmentation and Profiling	141
6.7. Segment Creation Methods	145
6.8. Operating the Segmentation	151
7. Behaviour Prediction (Early Warning)	155
7.1. Another Task for Predictive Data Mining	157
7.2. Exploring Behaviour	162
7.3. Time Series: The Foundation of Behaviour Modelling	164
7.4. Behaviour Modelling: The Practice	172
8. Campaign Optimization	177
8.1. Why Should Marketing Campaigns Be Optimized?	179
8.2. The Business Goal of Campaigns	179
8.3. The Main Question for Campaign Optimization	179
8.4. Planning Campaigns	180
8.5. Campaign Interactions	182
8.6. The Utility Score	183
8.7. Excessive Communication and Exclusion	186
8.8. Constraints	187
8.9. Allocation of Offers	188
8.10. The Optimal Allocation	189
8.11. Summary	199
9. The Implications of Data Quality	201
9.1. The Business Implications of Data Quality	203
9.2. Data Quality Issues	204
9.3. Improving Data Quality	207
9.4. Methodologies and Algorithms for Data Cleaning	215

| Table of contents |

9.5. Back-Testing	228
9.6. An Example of Cleaning of Master Data: A Register of Prisoners of World War II	229
10. Networks for Business Purposes	233
10.1. Network Perspective	235
10.2. About Networks	237
10.3. Business Use of Networks	242
10.4. Defining Networks	249
10.5. Preparing Network Data	251
10.6. Visualisation	254
10.7. Analysis	259
10.8. Network Simulation	263
10.9. Storing Network Data	264
11. Outlook	267
11.1. Industrial and Commercial Applications	269
11.2. Agricultural Applications	272
11.3. Service and Trade	279
11.4. Other Areas of Interest	281
Bibliography	289
Index	293
Introductions	301
